

Loopring is a blockchain technology company. Our team developed the world's first zero-knowledge proof-based layer-2 protocol for crypto exchanges and payment. The **Loopring Protocol** scales Ethereum's layer-1 performance by 1000X and reduces trading and payment costs by 800X.

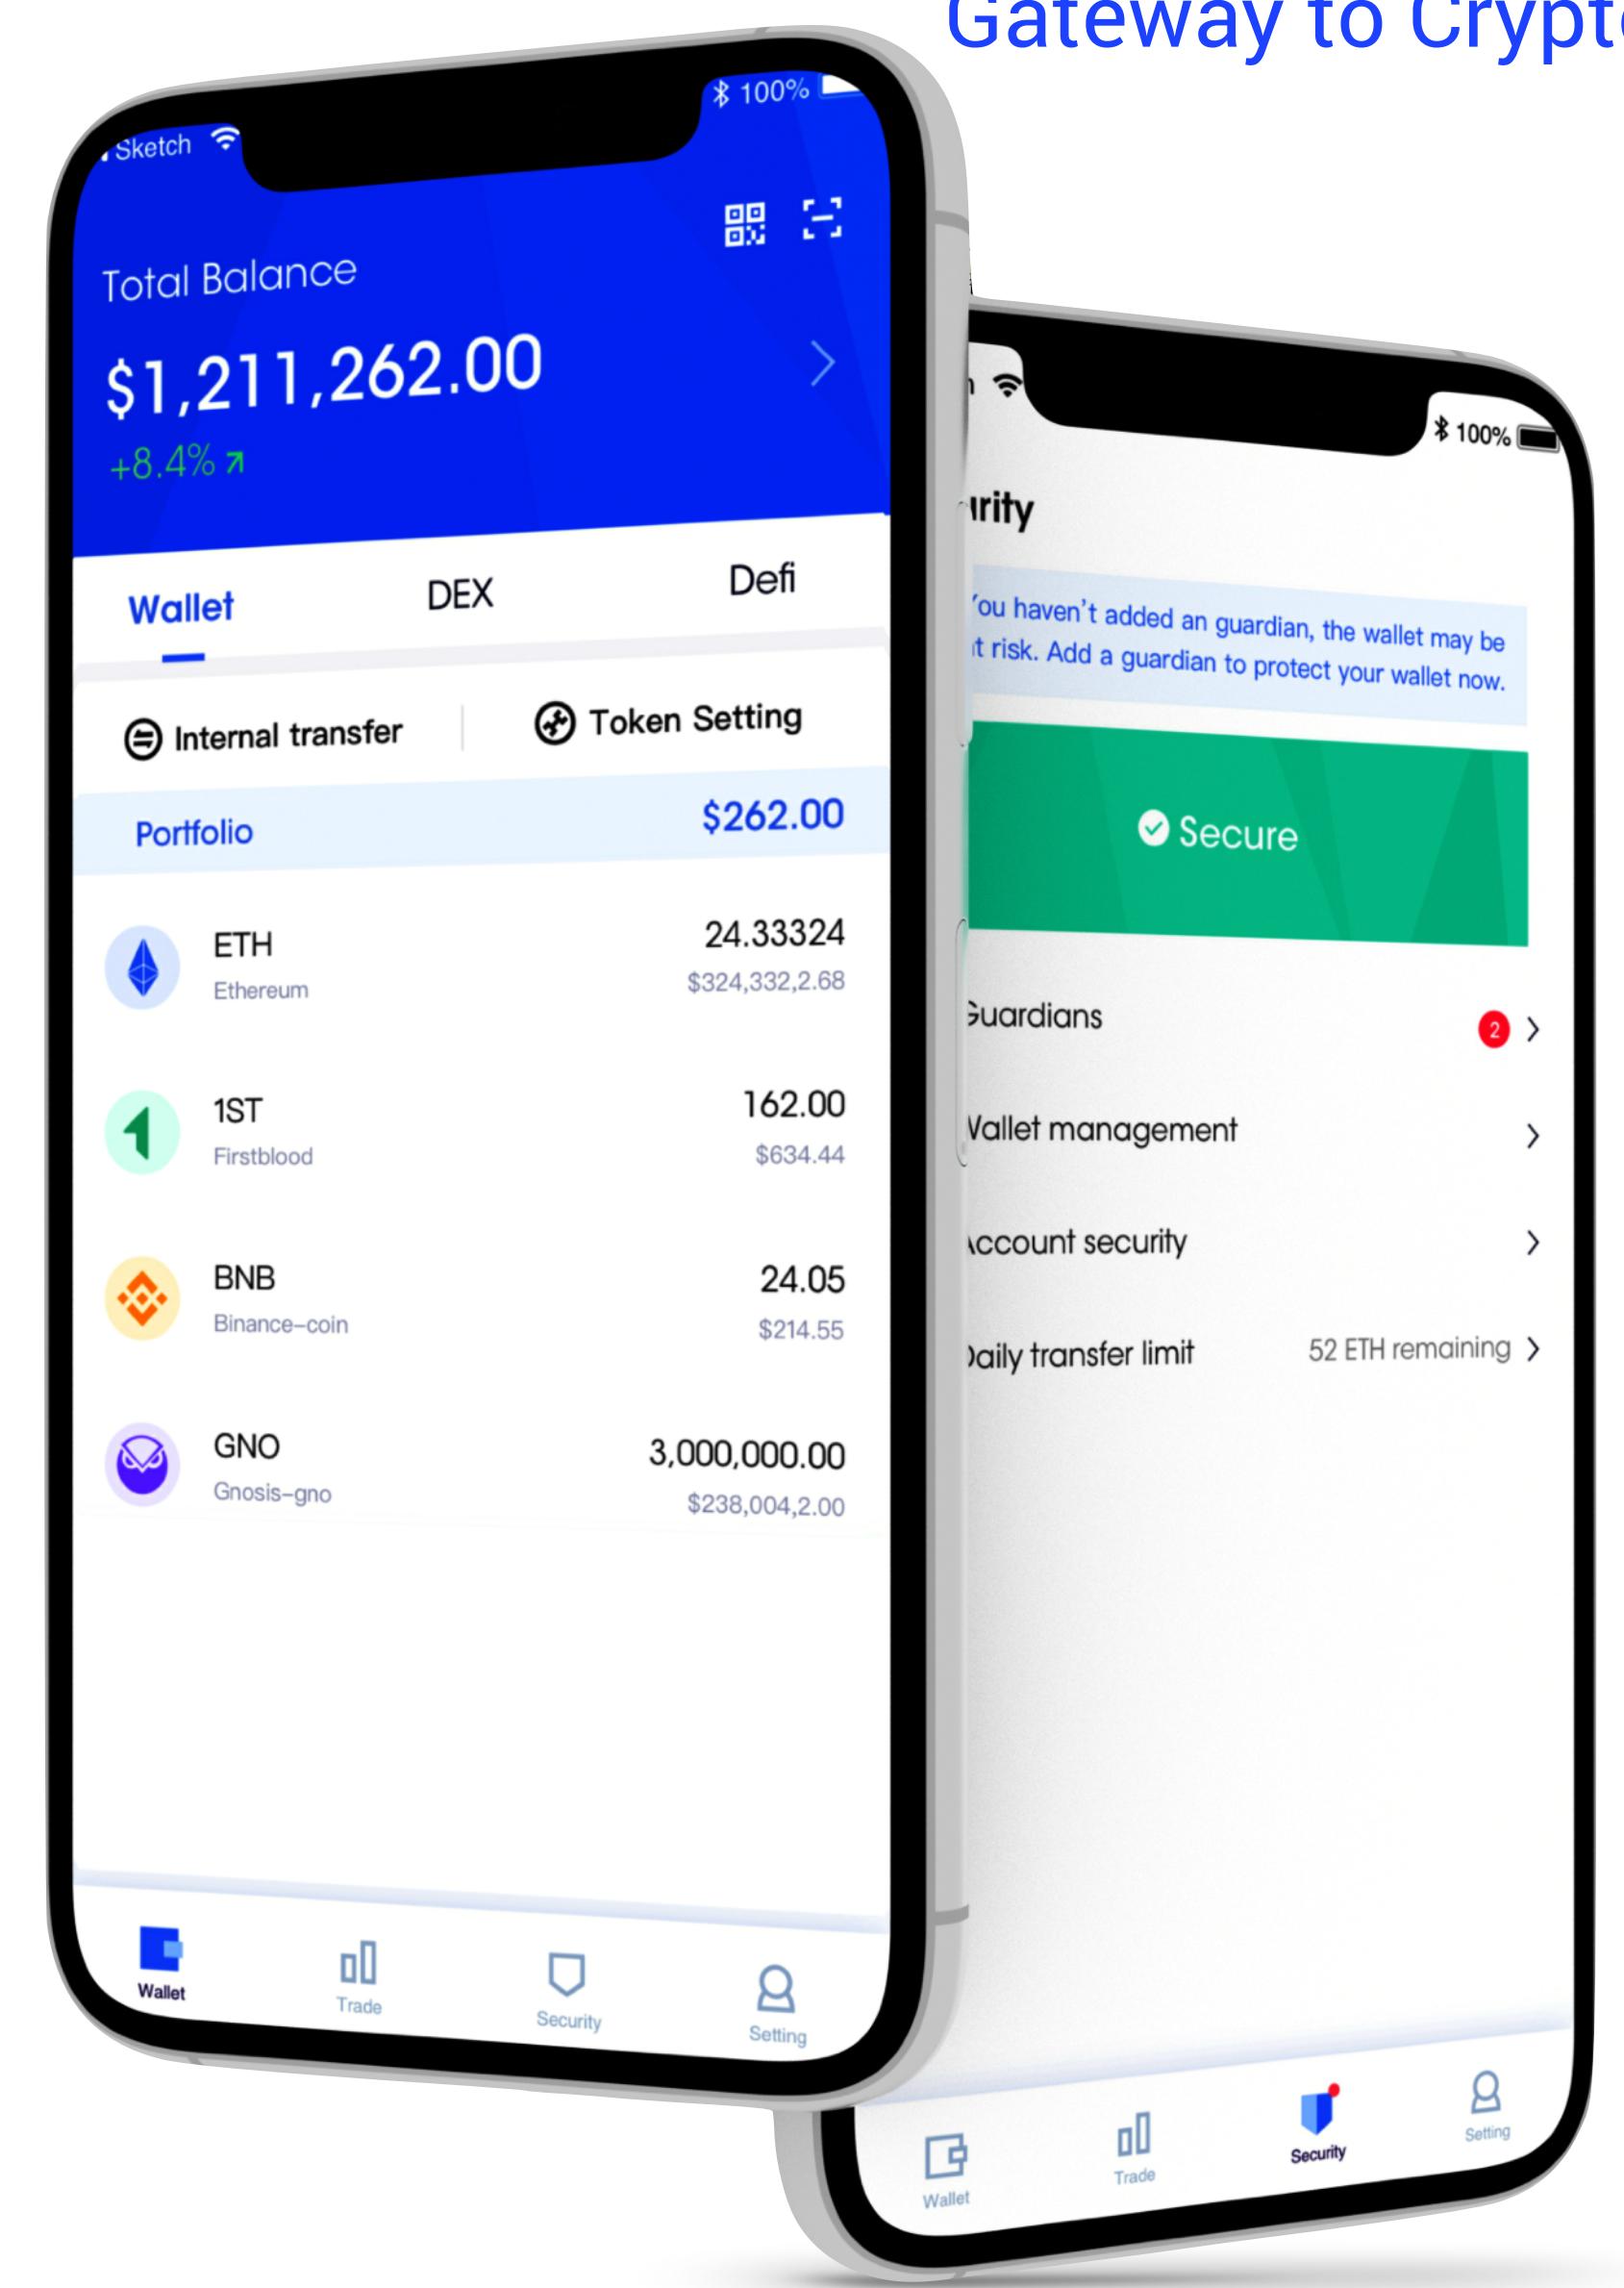

Our company consists of 20 team members. We have extensive experience working at Google, PayPal, Ernest & Young, Marvell, Alipay, JD.com, and Cheetah Mobile.

2 Loopring Exchange is a non-custodial crypto exchange built on top of the Loopring Protocol. It has settled more than 1 million trades since the launch in March 2020. As part of the exchange business, we also offer Relayer-as-a-Service for WeDEX, another decentralized exchange.

3 Loopring Wallet is a smart wallet mobile app we are building for the general public. Our target is to become average users' gateway to Decentralized Finance (DeFi).

4 Loopring Pay is our layer-2 fast payment service. We are integrating Loopring Pay and Loopring Exchange into Loopring Wallet. Our team strives to fuse the best user experience with the most advanced blockchain scaling technologies.
